Summary

AI/ML Engineer specializing in **Generative AI, Large Language Models (LLMs), and Deep Learning**. I have hands-on experience building end-to-end Machine Learning pipelines and developing intelligent agentic workflows using **Python, PyTorch, and LangGraph**. My focus is not just on training models, but on deploying scalable, production-ready AI applications using FastAPI, Docker, and AWS to solve real-world business problems.

Skills

Languages: Python, R, SQL
AI & Machine Learning: Generative AI (LLMs), Deep Learning, NLP, Model Optimization, RAG, Agentic Workflows
Frameworks & Libraries: PyTorch, Scikit-learn, LangChain, LangGraph, FastAPI, Hugging Face, PyMuPDF
MLOps & Infrastructure: Docker, MLflow, Git, GitHub Actions, Linux
Cloud & Databases: AWS (EC2, S3, Lambda), PostgreSQL, MongoDB, Redis

Education

University of Mumbai — Mumbai, Maharashtra, India
Bachelor of Data Science — *Aug 2022 – Jun 2025*

Projects

IntelliDoc RAG | React, FastAPI, LangChain, RAG, Qdrant, Docker, WebSockets, Redis [View on GitHub]

- Built a full-stack RAG assistant (**React, FastAPI**) enabling users to upload and query complex PDFs in natural language.
- Integrated real-time **WebSocket streaming with LangChain** to deliver instant, word-by-word AI responses with zero latency.
- Designed an asynchronous ingestion pipeline **using Celery and Redis** for seamless, non-blocking background processing of large files.
- Optimized retrieval performance and cost by **leveraging Qdrant vector database**, context-aware querying, and LLM caching.

Financial Research Engine | FastAPI, LangChain, LangGraph, PostgreSQL, Celery, Redis, AWS S3 [View on GitHub]

- **Developed a multi-agent workflow using LangGraph** and Groq LLMs to orchestrate specialized AI agents (Search, Data Analyst, Risk Assessor, and Editor), fully automating the generation of comprehensive financial research reports.
- Built a robust API layer using **FastAPI integrated with Celery and Redis** for distributed task queuing, preventing browser timeouts and allowing intensive AI generation to run asynchronously.
- Created a **real-time frontend dashboard** using HTML/JS and marked.js that polls the backend for job status updates, seamlessly rendering complex, markdown-formatted financial data.

Job Salary Prediction System | Python, Random Forest, XGBoost, MLflow, Docker, Render, Streamlit [View on GitHub]

- Built a **Machine Learning pipeline** using Random Forest and XGBoost trained on real-world job listings to predict salaries based on role, experience, location, and skills with high accuracy.
- Integrated **MLflow for experiment tracking**, systematically logging model parameters, metrics, and artifacts across multiple runs to compare and select the optimal model for production deployment.
- Containerized the full ML pipeline using **Docker** and deployed on **Render**, enabling real-time salary predictions through an interactive **Streamlit** web application.

Certifications

- Fundamental Tools of Data Wrangling (Coursera)
- Complete Data Science, Machine Learning, DL, NLP (Udemy)
- Data Structures and Algorithms Using Python
